

# EXISTING SYSTEM (without Middleware)

## EXISTING SYSTEM (without Middleware)

- 1. Duplication of Bussiness Logic**
- 2. Complicated desing and coding**
- 3. Overhead of other project's domain knowledge for developer / tester**
- 4. Difficult when change comes in bussiness logic**

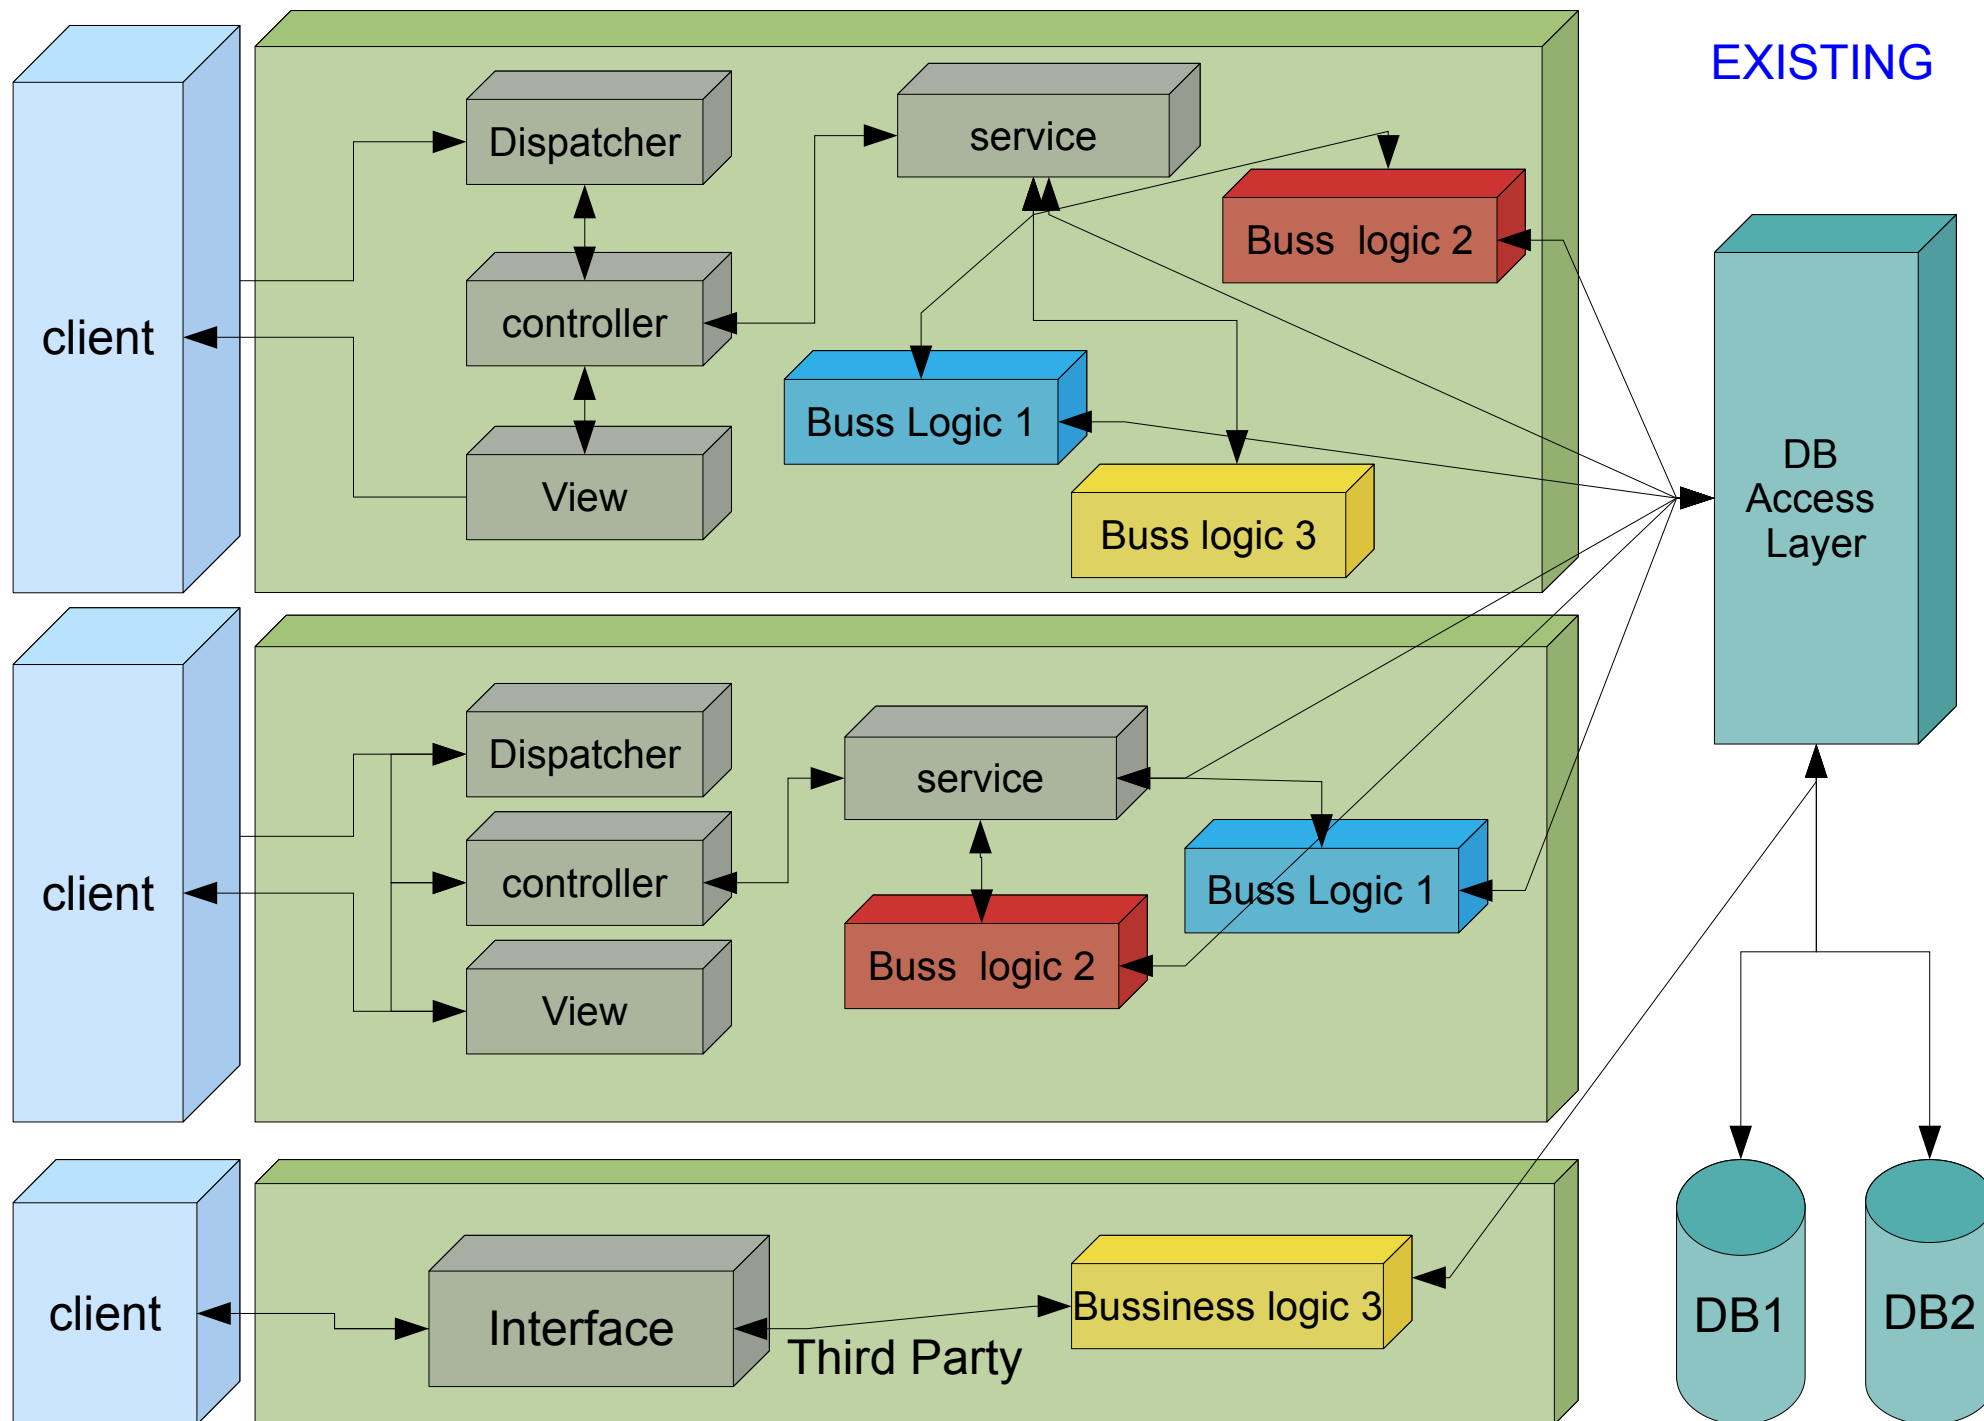

# NEW SYSTEM (with Middleware)

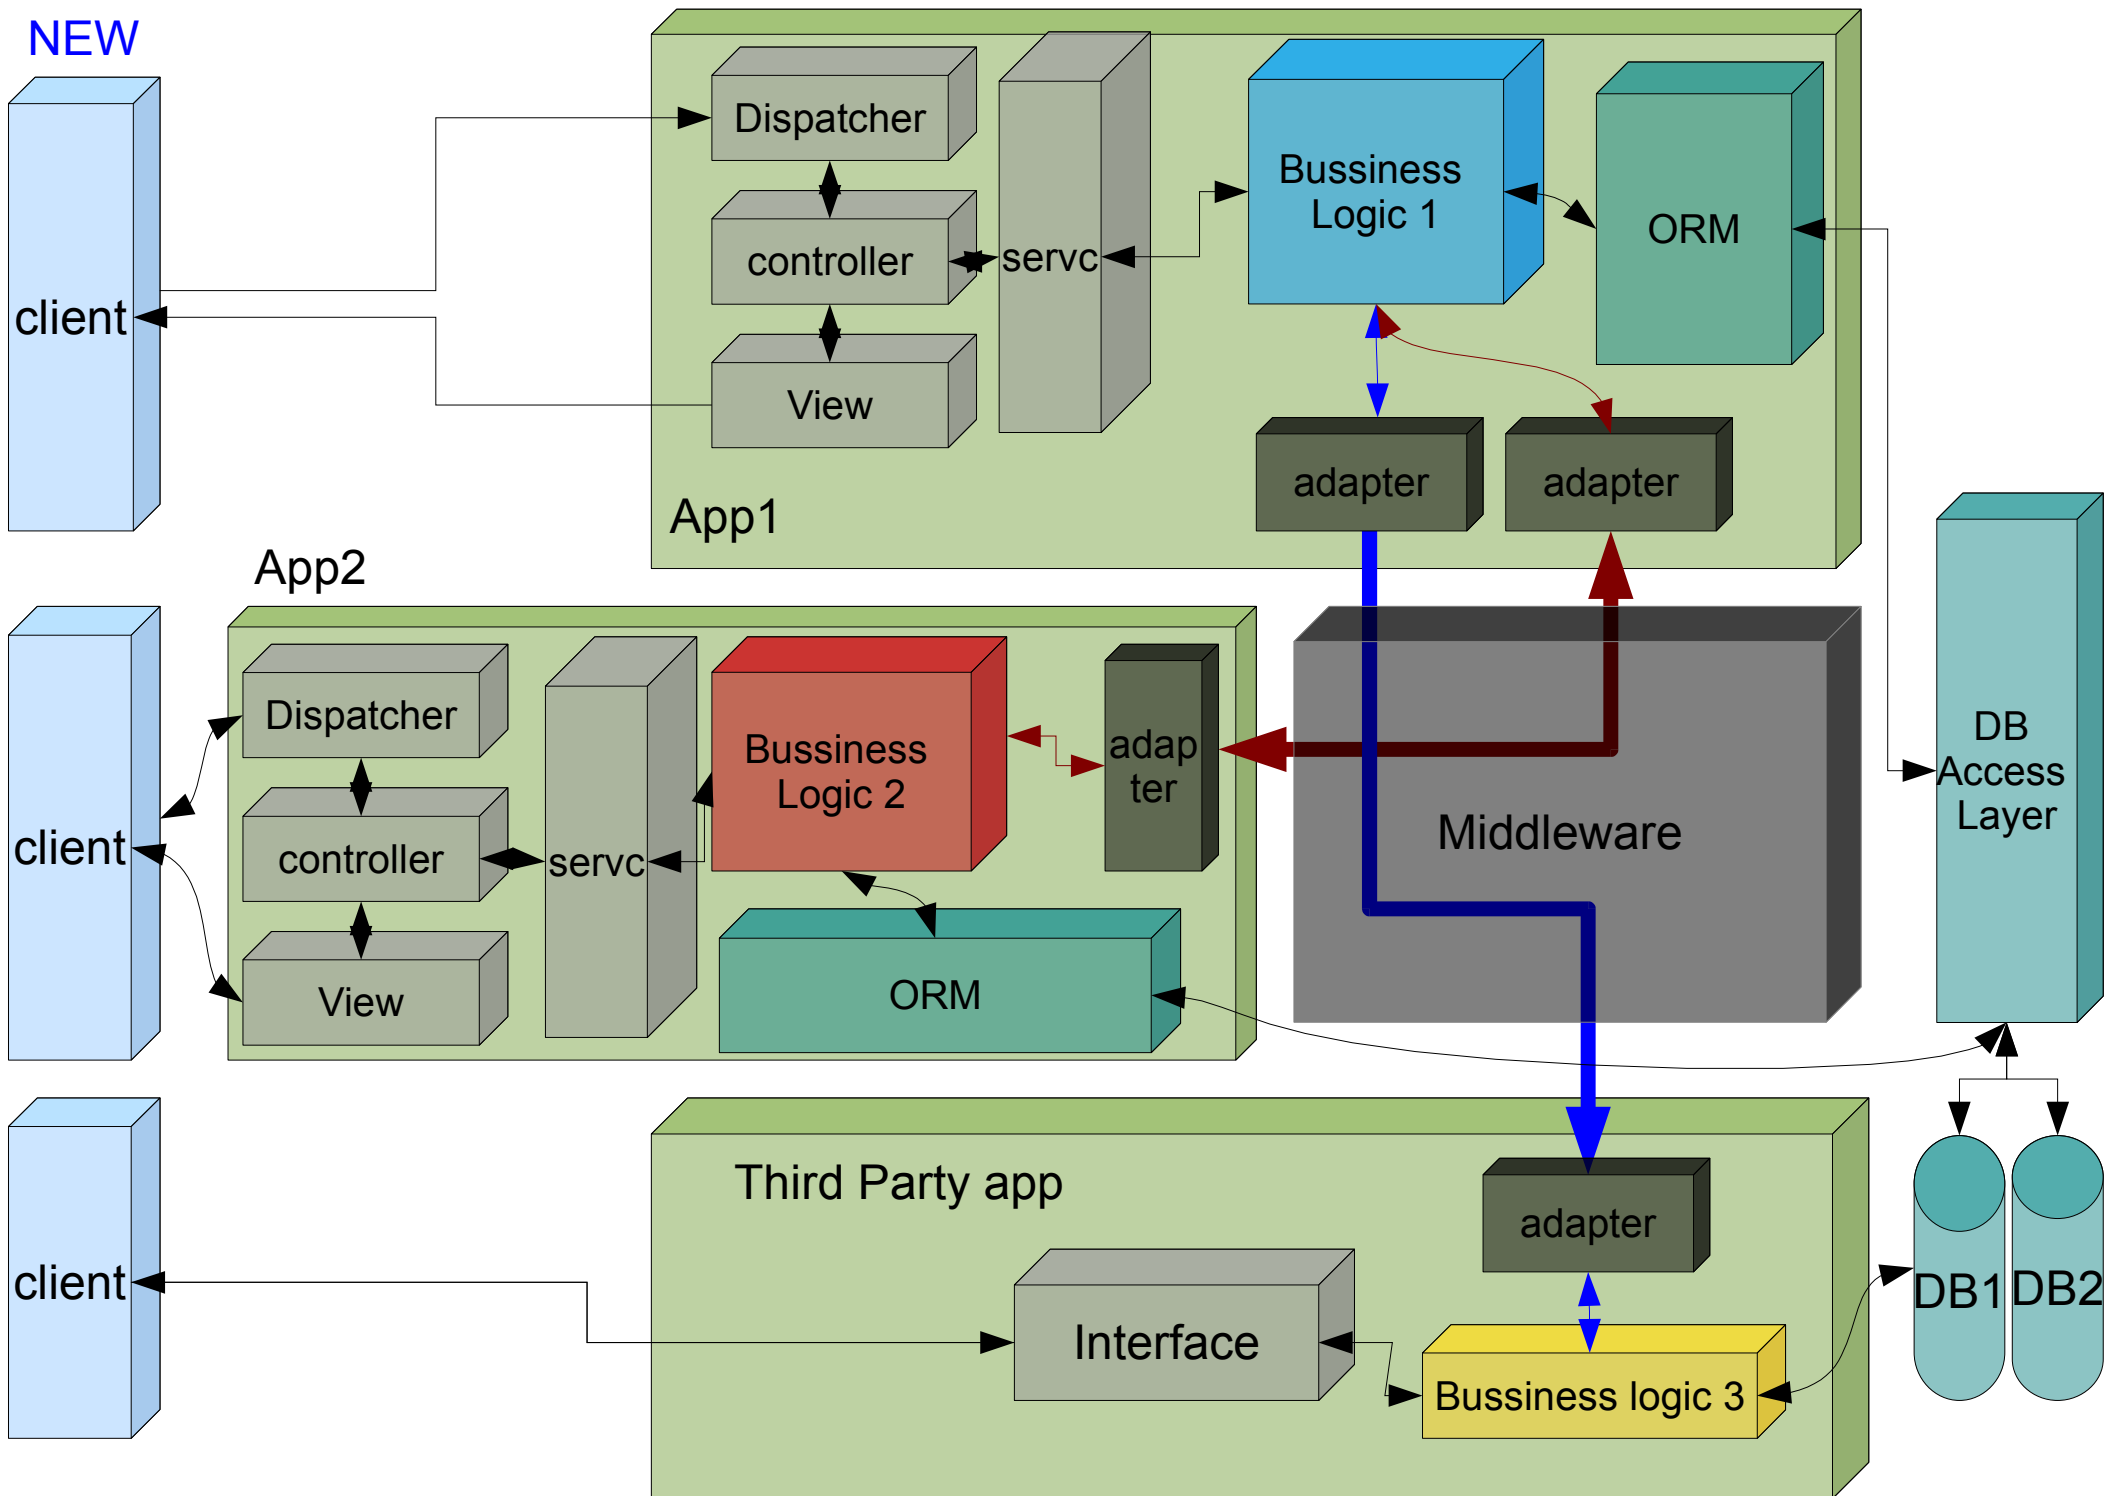

# **NEW SYSTEM (with Middleware)**

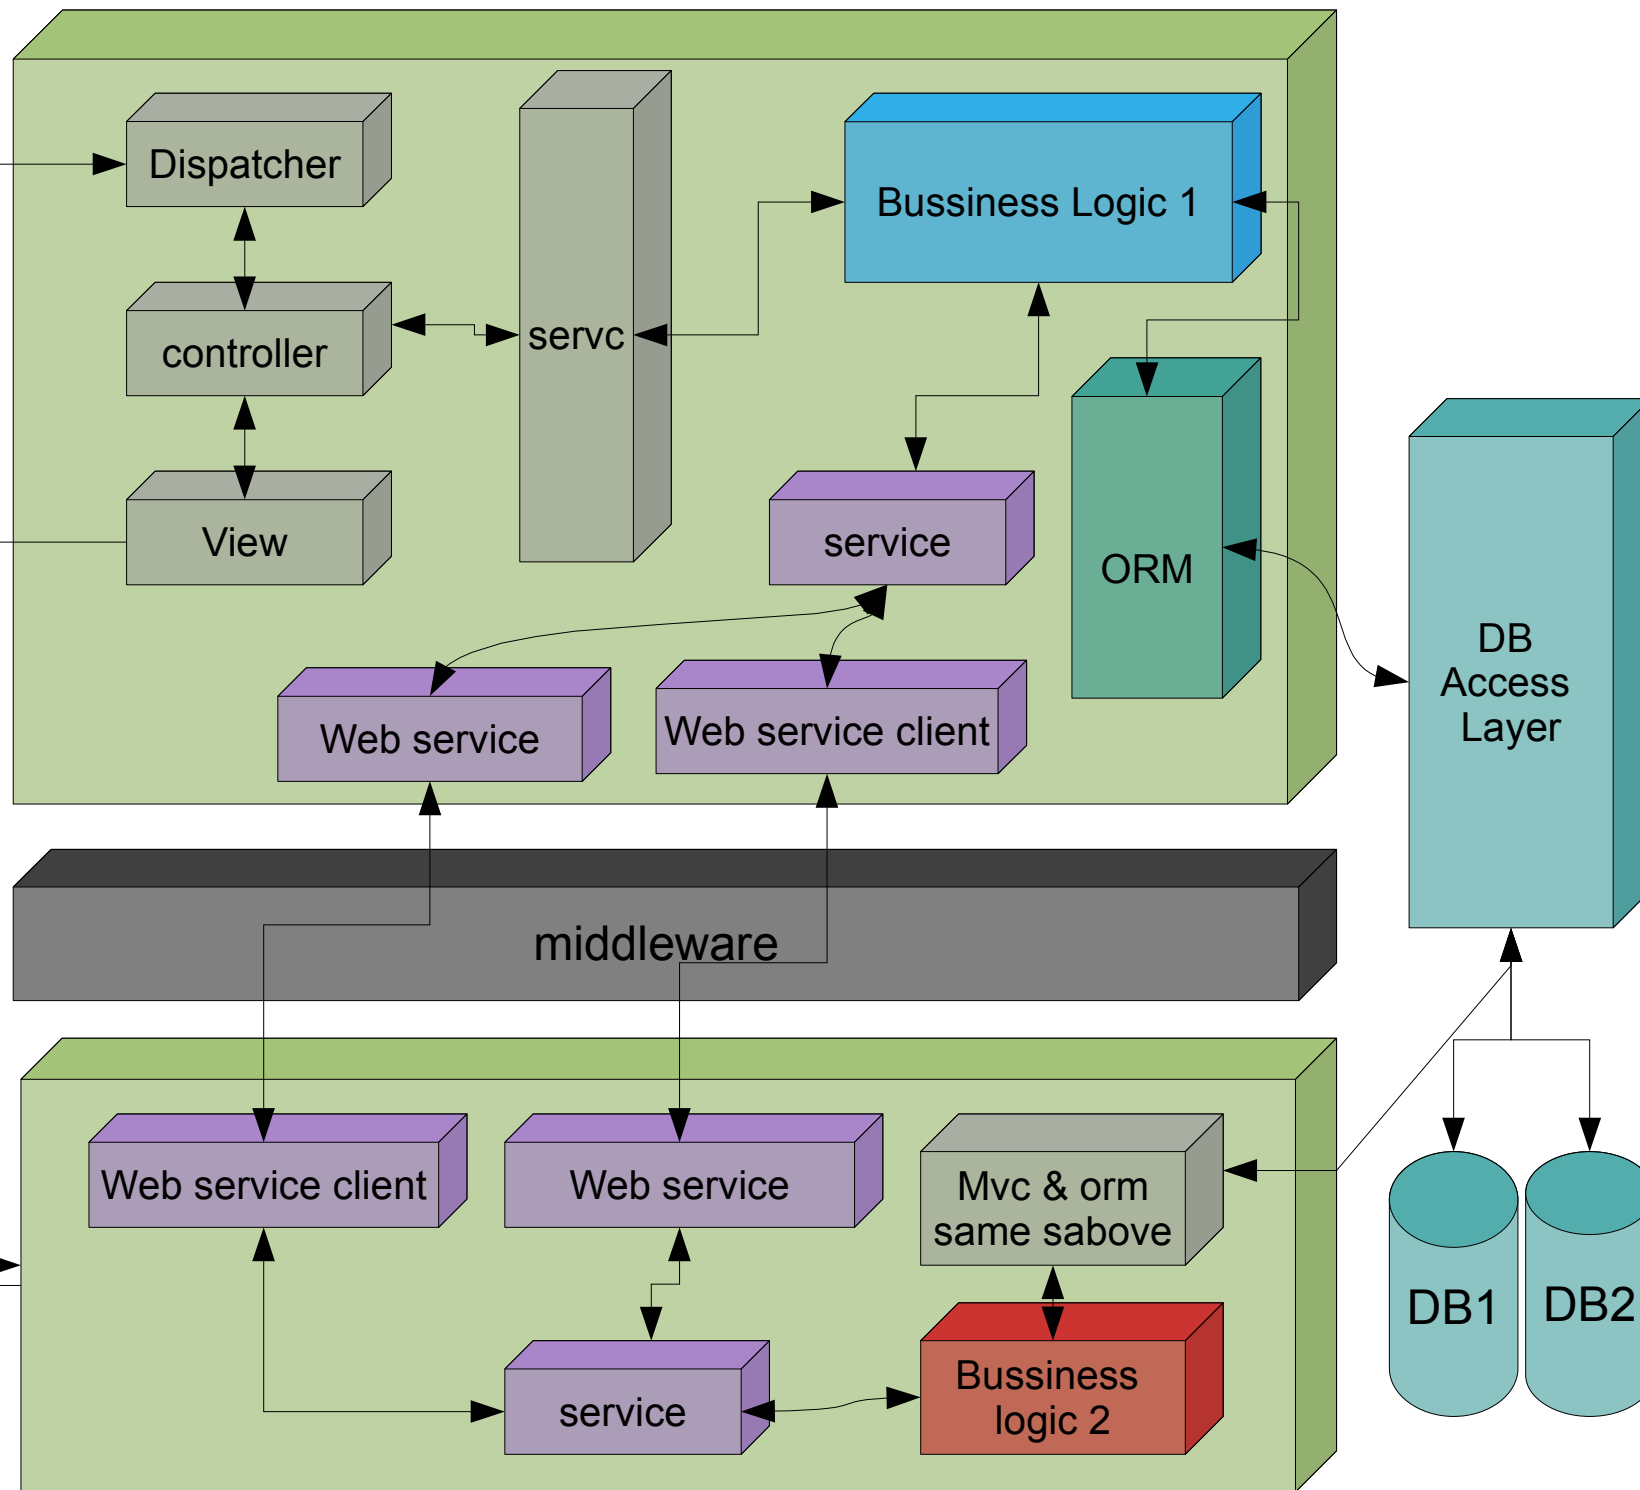

- 1. Centralized Bussiness Logic**
- 2. Simple desing and coding**
- 3. Domain experts handles their application's logic**
- 4. work only needed where change in business logic actually occure  
which does not affect other applications using that logic**
- 5. Easy Mantainance & change**
- 6. Easy Error / Query solving.**

EXISTING

A light blue 3D rectangular prism representing a client. The word "client" is written in black text on the front face, with a black arrow pointing to it from the right.

## MVC + Layered Architecture
